PDFreactor Quick Start Guide

1 DOWNLOAD

Go to www.pdfreactor.com/download and download a PDFreactor package suitable for your system environment. (Skip this step for Docker.)

If you don't have a license key you can get a trial key at http://www.pdfreactor.com/request-trial/.

2 INSTALLATION

- Run the Windows installer
- Unpack the archive or use the RPM *
- Run the macOS installer
- Run `docker pull realobjects/pdfreactor`
- Import the JAR and POM into your Maven repo

* Requires a separate Java installation

3 INTEGRATION

- **PDFreactor Library:** From your local repo, include the `com.pdfreactor.pdfreactor` artifact in your Java app.
- **PDFreactor Web Service:**

  JavaScript, .NET, Node, PHP, Python, Ruby: Copy the client that matches your integration language from the `clients/` directory.

  REST/SOAP: Visit http://localhost:9423/service/ for information.

4 CONVERSION

```
PDFreactor pdfReactor = new PDFreactor();

Configuration config = new Config();

config.setDocument(
    "<html><body>Hello World></body></html>");

Result result = pdfReactor.convert(config);

byte[] pdfBytes = result.getDocument();
```
